This spreadsheet is adapted from the Sargent and Lundy cost algorithms documentation for a DSI installation, as incorporated in version 5.13 of the IPM model. The "References" tab lists the origination of these cost algorithms and other information used in this spreadsheet. The Unit tabs (i.e., GG1) replicate the cost algorithms found in the documentation. In addition, the Unit tabs show annualized costs and calculate a \$/ton figure. Emissions data aid in selecting inputs to the model. User must have "show objects" selected in Excel's options for the drop down menus to work:

IPM Model – Updates to Cost and Performance for APC Technologies, Dry Sorbent Injection for SO₂ Control Cost Development Methodology, Final March 2013, Project 12847-002, Systems Research and Applications Corporation, Prepared by Sargent and Lundy.
